

# Ms Catherine Tang

Education is not just about acquiring knowledge—it's also about shaping character, instilling values, and fostering attitudes that are essential for both personal growth and academic success. In the learning process, conceptual understanding is key, encouraging students to engage deeply with ideas, seek connections between concepts and develop critical thinking. I believe in an inquiry-based approach to learning, where students are not passive recipients but active participants in their own learning. Thus, I see myself as a facilitator, guiding, supporting, and inspiring students as they explore, question, and discover, empowering them to take ownership of their learning. I embrace an inquiry-based learning approach where students are not passive recipients of knowledge but active participants of the learning process. I see myself as a facilitator in the classroom, guiding and supporting the students as they explore, question and discover, taking ownership of their own learning.
